Extrixa Inc.

Contract signed for Technology transfer of 60 GHz band millimeter-wave wireless communication module

Extrixa Inc. (CEO: Junichiro Hosaka, hereinafter "Extrixa") has entered into an agreement with Fujikura Ltd. (hereinafter "Fujikura") for the technology transfer of 60GHz band millimeter-wave wireless communication module.

Using the technology transferred from Fujikura under this agreement, Extrixa will advance the commercialization of 60GHz wireless communication devices capable of high-speed, low-latency, long-distance transmission. By combining these with our proprietary low-latency video compression boards and image signal processing camera boards that enable high-quality video viewing even outdoors, Extrixa aims to provide solutions enabling high-quality video transmission in various environments.

To date, Extrixa has pioneered various use cases for 60GHz communications by combining our proprietary products with Fujikura's advanced high-frequency technology to create 60GHz band millimeter-wave wireless communication module, conducting numerous field trials in real-world environments.

Through these activities, Extrixa recognized the significant potential of the 60GHz business. Extrixa believes that integrating both companies' products will further enhance productivity and functionality, enabling us to provide more compelling solutions. Consequently, both companies have agreed that the technology will be transferred to us.

Under this agreement, Extrixa will acquire Fujikura's technology, patents, and related know-how pertaining to the design and manufacturing of 60GHz band millimeter-wave wireless communication module.

Going forward, Extrixa will ensure a stable supply and maintain a robust support structure for customers who hold high expectations through use case development. Additionally, Extrixa will expand our product lineup to meet new market needs, contributing to society's sustainable development through technological innovation and value creation.

About Extrixa Inc.

Founded in 2019, Extrixa is a venture company based in Shin-Yokohama, primarily engaged in the development and sale of 60GHz millimeter wave communication devices and image codec devices.

Leveraging its system development capabilities, the company is expanding its business by proposing low-latency, long-distance solutions for high-bandwidth data such as video, with an eye toward the next generation. It promotes the provision of low-latency image transmission solutions by combining its developed products.

About Fujikura Ltd.

Since its founding in 1885, Fujikura has leveraged its "Tsunagu" Technology™ cultivated through wire and cable manufacturing to provide reliable products and services across four business fields: energy, information and communications, electronics, and automotive electrical systems.
